THE RIGHT SOLUTION FOR EVERY DUST PROBLEM.

FINE DUST EMISSIONS ARE HAZARDOUS BUT BOSS ATTACHMENTS HAVE THE PERFECT SOLUTION.

Motofog is a range of fixed and mobile, nebulized jet dust suppression and dust control units. These diesel, petrol and electric powered units, combine reduced footprint & huge coverage, with low water & fuel consumption.

Water is sent from a high-pressure pump to the dual jet rotating nozzles, which are switchable between width and distance patterns. The head of the self-powered units are also electronically adjustable, for up/down and left/right movement, and can even be set to oscillate automatically.

Motofog are already a worldwide leader in the control of dust and odour. Their systems weigh down dust particles by simply binding them with droplets of water (fog) so they quickly fall to the ground through gravity.

Livio Pace at Boss Attachments says that every dust and odour problem is unique so they work closely with their customers to find the right solution.

For challenging worksites where mains water supplies are limited, full self-supporting systems

are available, along with units suitable for mounting on vehicles, excavators and other equipment.

Each unit can be used indoor or in open spaces where these incredible units generate a wall of fog from 10 to 55 metres away and up to 35 metres high.

These units are also very suitable for odour control, with the simple addition of control fluids to the water supply.

Boss Attachments stock the full range of Motofog dust suppression units, available in a range of sizes, to suit applications from the smallest backyard renovation, to the largest demolition & civil projects.

There is a system ready to solve your dust problems now.

To find out more about the best dust suppression system available give Boss Attachments a call now on 1300 116 661 or visit bossattachments.com.au
